

Terrorism Tracker is a powerful risk management tool for security managers, analysts and researchers.

At its core is a global database of terrorist attacks and plots. Each terrorist event is geo-tagged to allow its actual location to be plotted and viewed using the familiar Google Maps™ interface.

Terrorism Tracker is designed to meet the needs of global security professionals:

Search:

Conduct simple or complex searches monitor terrorist activity by location, target type and business sector, date range, tactic, group, lethality and other variables. Our database started on 1 January 2007 and grows daily.

Analyse:

Display results in map and list forms ready to be printed out or inserted into reports and briefings.

Monitor:

Display terrorist activity around the world, or in your country or region, on a full screen electronic map. This solution is designed for an operations room environment and updates every few minutes to ensure that the latest incidents are always on screen.

Visualise:

Display search results using Google Maps™ to better understand the global distribution of events and the terrain in which they take place

Janusian's team of intelligence specialists monitor open and privileged sources to ensure that the database is always up to date and the terrorism information you need is there when you need it.

The Terrorism Tracker project is a collaboration between Aon and Janusian, two of the most respected names in terrorism risk management
